Library Management System in Java

Summery:

This is a management system project of a library. This project will manage those peoples information who are related to this library. Using this project the user/admin will be able to store all the information about a person. The user/admin will easily be able to store the readers as well as the stuffs name, id, address, their status (permanent reader or monthly), salary, gender, age and other necessary information. The user/admin will also be able to edit them and if he/she wants, he will be able to delete them too. The program will show the user/admin those data he/she stored about the people related to this library

As a result it will be very much easier for the user/admin to manage the library.
